

Open**Blue**Net Zero Advisor

Working smarter, together

Companies are not just using digitalization to reduce their Scope 1, 2 and 3 carbon emissions.

OpenBlue can gather and analyze data about energy, water, materials and greenhouse gas emissions involved in every phase of a building's life cycle: its design, construction, operation, renovation and end-of-life. By using Johnson Controls Sustainability Maturity Model that incorporates reporting, tracking and management, companies can evaluate the total environmental impact of their property portfolio, as well as estimate the impact of any retrofit.

Annual reporting of scope 1 (direct) and 2 (indirect) of
